Profile and Career Objective

Hard-working, passionate developer with 7+ years experience with Rails. Astute and deadline driven, quickly adapts to collaborative environments while creating high-quality, well-tested code within strict timeframes. Internally motivated and always looking to grow, learn, and teach. Proud member of the BridgetownRB core team and contributes to OSS via code, tutorials, and design.

Technical Skills

HTML • CSS: Bootstrap, TailwindCSS • JavaScript: ReactJS, StimulusJS, AlpineJS • Ruby: Rails, Sinatra • Vim • Git: GitHub, GitLab, CLI • SQL: Postgresql, MySQL • AWS: S3, SQS • Workflows: Scrum, Agile • Paradigms: Data Modeling, MVC, OOP, REST, APIs • Unit Testing: RSpec, MiniTest, Error Tracking • DevOps: CI/CD, Heroku, Capistrano

Professional Experience and Recent Work History

Invoke Web Services

Fullstack Web Developer - 2015-present

I work with clients and developers to build feature-riched applications with a focus on the Ruby on Rails stack. I operate under Invoke Web Services when contracting out development work.

- Built a small donation app that connects Stripe's API to a client's business checking account to increase sponsorships
- Practices TDD/BDD, manages projects, develops, maintains, and debugs Rails applications
- I have worked in enterprise-level corporate companies where data privacy and clearance is top priority

Archway Recruiters

Contract: February 2022-October 2022

Implemented unit tests, led team meetings, and managed project to on-board a subsidiary company to CRM utilized for medical recruitment. Recruiters can manage clients, post jobs, and e-mail candidates.

- Optimized a substantial amount of N+1 queries. Reduce queries by 40% and database stress by 60%
- Managed and configured S3 and SQS and upgraded a legacy custom email system onto ActionMailer using AWS
- Designed and coded mobile-friendly email templates for ActionMailer and tested compatibility with email clients

Saddlebook, Inc.

Contract: August 2022-October 2022

Helped incorporate a complex StimulusJS-powered slider form for a model using Hotwire and Turbo Frames to swap out the input fields with the rendered data after being updated without breaking user interface.

- Designed UX with color palette, typography, forms, and ensured balance and a cohesive brand identity
- Coded designs from my mock-ups using TailwindCSS, Hotwire, Stimulus JS, ViewComponents
- Engaged in Agile Development consisting of Scrum style project management, iterations, stand-ups meetings
